

Software Developer (m / f) **PLC programming - plant engineering / automation technology (full-time)**

About us

The company SEAP Automation GmbH is an innovative partner in the development of automated conveyor systems and production plants according to the latest standards.

In cooperation with national and international companies, we are represented in various industries. Our success in the areas in the airport technology and automotive industry as well as in the environmental and storage technology is based on our more than 25 years of experience. As a leading supplier in the development of the latest automation systems, we design customer-specific automation processes for new plants and find individual solutions for expanding or supplementing existing plants.

As a dynamic owner-managed company, our engineers work flexibly and on the highest technical level.
